MATERIALS 03

ANODISED ALUMINIUM

MATERIAL DETAILS

Anodising is an electrochemical process used to produce a film of aluminium oxide on the surface of the part. The anodised surface results in an increased resistance to wear and corrosion as well as increased durability and hardness. The anodised surface can be dyed in various coloured finishes providing an alternative finish to painting.

BRASS

MATERIAL DETAILS

All solid brass components are brushed and treated to achieve the desired finish of our three available finish options. The surface is then waxed to add a layer of protection and to prevent accelerated aging.

GLASS

MATERIAL DETAILS

Three different types of glass is used in our lighting products; mouth blown, borosilicate and textured art glass. The mouth blown glass is skillfully hand crafted by the glass blowers in Adelaide's Jam Factory. As each piece is handmade they will vary slightly in thickness, colour and texture, giving each shades its own unique, distinctive look. The tubular formed borosilicate glass is available in both fluted and uniform variations. The textured art glass is available in a range of colours and textures, including a fluted option and more abstract rippled variations.

HARDWOOD TIMBER

MATERIAL DETAILS

Timber is a natural material that is unique in its appearance. There can be distinct differences in hue of the timber as well as the depth and variety of the grain. These distinctive characteristics define its origins and constitute its main aesthetic value. Our timber products are predominantly manufactured from FSC certified timbers.

LAMINATE

MATERIAL DETAILS

Laminate is a cost effective, low maintenance material. It is light-weight and durable making it resistant to surface wear and stains. The laminate used in several of our furniture pieces has a consistent surface finish with a subtle texture and soft sheen.

MARBLE

MATERIAL DETAILS

Marble is a metamorphic rock that forms when limestone is subjected to heat and pressure. It is composed primarily of the mineral calcite and usually contains other minerals, such as clay minerals, micas, quartz, pyrite, iron oxides, and graphite. These minerals are what gives marble its unique colours and patterns. The Carrara and Calacatta marble we use is sourced from large quarries in Italy, whereas the Elba marble is sourced from a single quarry in Greece.

MIRROR

MATERIAL DETAILS

Mirror is manufactured by applying a reflective coating to the rear surface of glass. The mirror used in our products is produced with two coats of special backing paint, offering additional protection to the reflective coating from heat moisture and chemicals. In addition to this it has a high light reflectance, giving the ability to produce a lighter and brighter reflection.

PAINTED

MATERIAL DETAILS

Our high quality painted finishes are achieved using a 2 pack paint system. This involves a two step process involving an acrylic paint melamine and a hardener resin. When combined these two resins result in a chemical reaction producing a hardened solution. The finish achieved is tough, luxurious and highly durable and is possible in a wide range of colours.

POWDER COAT - STANDARD

MATERIAL DETAILS

Powder coating is the electrostatic application of dry powder to metal surfaces which are then cured under high heat. This ensures a hardened, durable painted surface that is tougher and more durable than conventional paint. Powder coat is available in a large range of colours and finishes, including, gloss, matte and satin. For custom colours please refer to page 82.

POWDER COATED MDF

MATERIAL DETAILS

Powder coated MDF is a highly durable, cost-effective finish that's free of VOCs and more environmentally friendly than traditional treatments such as laminates, veneers and wet paint finishes. The simple process produces an even, seamless, highly durable and chemical resistant coating on the MDF, which can be cut in a multitude of shapes and curves. This results in high quality finished pieces in a range of complex shapes.

VENEER

MATERIAL DETAILS

The timber used for our veneers are natural materials that are unique in appearance. There can be distinct differences in hue of the veneer as well as the depth and variety of the grain. Veneer is cost effective, durable and resists warping and fragmentation. It can be polished to clear to display the natural hue of the timber or stained to a particular colour.

MATERIAL VARIATIONS

All of our products are individually assembled and finished, meaning minor variations in finish, colour and form can occur. Several products include handmade components, including those crafted from glass, ceramic and timber. These will all have their own unique forms, patterns and/or finishes. Natural materials, such as timber, veneer and marble will also have varying colours and grains, this is evidence of their natural and unique qualities. These slight variations are to be expected and will not be accepted as a fault or defect in the product.

Colours and finishes as viewed on printed and digital sources are representative only and may not appear identical to the finished product.
